

# JSC TMT TAXON

## Clearer Grade Thermally Modified Timber Range

The JSC TMT® Taxon range is a clearer grade thermally modified timber offering from JSC.

This range has a soft, even-grained appearance with minimal knots, and a beautiful rich brown tone that would suit your requirements well as it is suitable for a variety of applications.

This range is a great alternative to Western Red Cedar based on its look and properties.

## USES OF THE JSC TMT® TAXON RANGE

The thermal modification process permanently alters the cell structure which enhances the physical properties of the timber making the range suitable for a variety of interior and exterior applications such as exterior claddings, interior linings, battens and more depending on the type you choose.

- **Exterior Cladding:** The JSC TMT® Taxon range is available in a range of JSC TMT® weatherboard and moulding profiles. Supplied in good average length spreads which allow for greater design possibilities and is the perfect choice for your vertical and horizontal cladding or panelling requirements.
- **For Interior Linings:** TMT Taxon's beauty is favoured for interior panelling, sarking, and mouldings and because it is a completely natural product modified only using heat and steam, there is no leaching of treatment chemical or natural resins.
- **Other Applications:** Also suitable for other applications such as laminated beams and structures, where lightweight, strength, and stability are key variables.

Like any natural timber, the JSC TMT® Taxon range will eventually weather to shades of grey when subjected to the environmental elements of temperature, moisture, and UV rays. Therefore, to help maintain your fresh, new colour, the use of a premium grade oil stain with a UV protectant is recommended, with a factory applied envelope coat as the first step to a long and beautiful life. JSC TMT® Taxon takes a full range of oil and water-based coatings well and is able to accept darker coatings with a significant reduction in dimensional movement.

Note: When fixing JSC TMT® products use stainless steel fixings only.
